

Morphic Studio

Document 26 — Collaboration & Team Workspace (Expanded Specification)

Document ID: MS-026

Version: 2.0

Status: Expanded Specification

Priority: Core Platform Infrastructure

Purpose

The Collaboration & Team Workspace system enables multiple creators to work together on projects while maintaining organization, security, accountability, and creative consistency.

The system supports both solo creators and collaborative teams by providing role-based access, shared workspaces, review workflows, task assignments, communication tools, and version awareness.

Although Morphic Studio Version 1 is intended for a maximum of 3–5 users, the architecture is designed to scale to larger creative teams without major redesign.

Vision

Creative collaboration should feel natural.

Each contributor understands:

- what they are responsible for,
- what has changed,
- what still needs review,
- and how their work fits into the overall production.

The platform should reduce coordination overhead so creators can focus on storytelling.

Core Philosophy

People collaborate. The platform coordinates.

Morphic Studio should organize collaboration without becoming an obstacle to creativity.

Objectives

The Collaboration System shall:

- Support shared projects.
 - Support multiple contributors.
 - Manage permissions.
 - Record activity history.
 - Track approvals.
 - Assign creative tasks.
 - Enable communication.
 - Preserve accountability.
-

Workspace Structure

The hierarchy is:

Workspace

↓

Projects

↓

Episodes

↓

Scenes

↓

Assets

Tasks

Exports

Each workspace acts as the organizational container for creative work.

Workspace Types

Supported workspace types include:

Personal Workspace

One creator.

Private projects.

Small Team Workspace

2–10 contributors.

Shared production.

Studio Workspace

Departments.

Role management.

Asset sharing.

Future expansion.

Team Roles

Possible roles include:

Owner

Full control.

Project management.

Billing (future).

Workspace settings.

Administrator

Manage users.

Manage permissions.

Moderate projects.

Project Manager

Coordinate production.

Approve workflows.

Assign tasks.

Track progress.

Writer

Scripts.

Dialogue.

Story revisions.

Artist

Characters.

Backgrounds.

Concept art.

Panels.

Animator

Motion.

Transitions.

Camera.

Timing.

Voice Director

Voice assignments.

Dialogue review.

Narration.

Reviewer

Quality assurance.

Approvals.

Feedback.

Viewer

Read-only access.

Permissions

Permissions may include:

View

Create

Edit

Delete

Approve

Publish

Export

Manage AI

Manage Assets

Invite Users

Configure Workspace

Permissions are role-based but can also be customized.

Project Membership

Each project stores:

- Members
 - Role
 - Join Date
 - Last Activity
 - Responsibilities
 - Assigned Tasks
-

Task Assignment

Tasks may be assigned to individuals.

Examples:

Generate Character

↓

Assigned to Artist

Review Character

Assigned to Reviewer

Storyboard Approval

Assigned to Project Manager

Voice Review

Assigned to Voice Director

Task States

Tasks progress through:

Not Started

In Progress

Waiting

Review

Approved

Completed

Archived

Review System

Every important production stage may require approval.

Examples:

- Story approval
- Character approval
- Storyboard approval
- Comic approval
- Animation approval
- Final export approval

Reviews help maintain quality.

Comments

Comments support:

- Rich text
- Asset references
- Scene references
- Character references
- Mentioning collaborators
- Status updates

Every comment belongs to a specific project location.

Activity Timeline

The platform records:

User

Action

Timestamp

Affected Asset

Project

Result

This provides a complete audit trail.

Notifications

Collaborators receive notifications for:

Task assigned

Task completed

Approval requested

Comment received

Project updated

Asset changed

Workflow completed

Export ready

Notifications should be configurable.

Presence System

Future versions may display:

Currently online

Current page

Current scene

Current asset

Editing indicator

Typing indicator

Conflict Resolution

If multiple users edit simultaneously:

- Detect conflicts.
- Preserve both versions.
- Present comparison tools.
- Allow manual resolution.

Data loss should never occur.

User Stories

As a writer, I want to know when my script has been approved.

As an artist, I want to see only tasks assigned to me.

As a project manager, I want to monitor overall production progress.

As a reviewer, I want to provide structured feedback.

As a workspace owner, I want to control permissions.

Functional Requirements

The Collaboration System shall allow users to:

- Create workspaces.
 - Invite collaborators.
 - Remove collaborators.
 - Assign roles.
 - Assign tasks.
 - Leave comments.
 - Review work.
 - Approve assets.
 - Monitor activity.
 - Track project progress.
-

UI Components

The interface includes:

Workspace Dashboard

Project Members

Task Board

Activity Feed

Comments Panel

Notifications Center

Review Queue

Permissions Manager

Project Timeline

Collaboration Settings

Database Entities

Core entities include:

Workspace

WorkspaceMember

Role

Permission

Task

TaskAssignment

Review

Comment

Notification

ActivityLog

Invitation

API Considerations

Potential endpoints include:

Create Workspace

Invite User

Assign Role

Retrieve Members

Assign Task

Update Task

Submit Review

Retrieve Activity

Manage Permissions

Workspace Settings

Non-Functional Requirements

The Collaboration System should:

Support concurrent users.

Maintain low latency.

Protect project data.

Record every important action.

Scale to future studio environments.

Remain intuitive for solo creators.

Error Handling

If permissions are insufficient:

- Deny action.
- Explain why.
- Suggest required role.

If invitations expire:

- Notify sender.
- Allow resend.

If synchronization fails:

- Retry automatically.
 - Preserve user changes.
-

Future Expansion

Future versions may include:

Real-time collaborative editing.

Live storyboard reviews.

Shared whiteboards.

Voice/video meetings.

AI meeting summaries.

Production calendars.

Department dashboards.

Studio analytics.

Plugin ecosystem.

Marketplace for collaborators.

Acceptance Criteria

The Collaboration & Team Workspace system succeeds when creators can work together efficiently, understand responsibilities, review each other's work, and complete projects without confusion or loss of accountability.

Key Principle

Collaboration should amplify creativity rather than complicate it. Morhic Studio provides structure, visibility, and accountability while allowing creators to focus on building great stories together.
