

Morphic Studio

Document 02D — Product Requirements Document (PRD)

AI Requirements

Document ID: MS-002D

Version: 1.0

Status: Draft

1. Purpose

This document defines how artificial intelligence operates within Morphic Studio.

AI is not treated as a single feature.

Instead, AI is a coordinated collection of specialized responsibilities managed by Morphic Core.

The primary goal is to assist creators while preserving creative control, project consistency, and long-term continuity.

2. AI Design Principles

Every AI component must follow these principles:

- Understand before generating.
 - Respect Story Bible canon.
 - Respect Project DNA.
 - Learn from the Creative Journal.
 - Preserve Creative Timeline history.
 - Explain significant decisions.
 - Never permanently overwrite user work without confirmation.
-

3. AI Task Flow

Every AI request follows this sequence:

1. Receive the user's request.
 2. Read the Project Brain.
 3. Read the Story Bible.
 4. Read Project DNA.
 5. Read the Creative Journal.
 6. Review the Creative Timeline if relevant.
 7. Search for reusable assets.
 8. Plan the work.
 9. Execute only the required AI tasks.
 10. Present results for approval.
 11. Save approved outputs and update project memory.
-

4. AI Agent Responsibilities

Planner Agent

Responsibilities:

- Analyze scripts.
 - Break stories into scenes.
 - Identify missing information.
 - Create production plans.
-

Story Agent

Responsibilities:

- Build and maintain the Story Bible.
 - Detect continuity conflicts.
 - Update lore and relationships.
-

Character Agent

Responsibilities:

- Generate characters.

- Maintain consistency.
 - Manage expressions, outfits, poses, and evolution over time.
-

World Agent

Responsibilities:

- Track locations.
 - Manage world-building.
 - Preserve geography and environmental rules.
-

Asset Agent

Responsibilities:

- Store reusable assets.
 - Prevent unnecessary duplication.
 - Suggest existing assets before creating new ones.
-

Comic Agent

Responsibilities:

- Build page layouts.
 - Arrange panels.
 - Recommend camera angles.
 - Manage speech bubbles.
-

Animation Agent

Responsibilities:

- Plan animation sequences.
 - Coordinate movement.
 - Prepare animation-ready assets.
-

Audio Agent

Responsibilities:

- Manage voices.
 - Suggest music.
 - Handle sound effects.
 - Coordinate ambient audio.
-

Quality Agent

Responsibilities:

- Detect inconsistencies.
 - Verify Story Bible alignment.
 - Check Project DNA compliance.
 - Flag potential issues before output approval.
-

5. AI Decision Rules

The AI must:

- Ask for clarification when required information is missing.
 - Avoid assumptions that could change the story.
 - Suggest alternatives rather than forcing a single solution.
 - Clearly explain conflicts when they arise.
-

6. Learning Boundaries

The AI may learn from:

- Approved project data.
- Story Bible updates.
- Creative Journal entries.
- Project DNA changes.

The AI shall not automatically change project canon based solely on generated content.

7. Human Oversight

The creator always has final authority.

The platform shall allow users to:

- Accept AI suggestions.
 - Reject suggestions.
 - Modify outputs.
 - Regenerate specific elements.
 - Roll back changes using the Creative Timeline.
-

8. AI Extensibility

New AI agents may be introduced in future versions.

All agents shall communicate through the AI Task Bus coordinated by Morphic Core.

This ensures the platform can evolve without restructuring existing systems.
