

Morphic Studio

Document 04 — UX Bible

Document ID: MS-004

Version: 1.0

Status: Draft

Purpose

The UX Bible defines how creators should experience Morphic Studio.

It is not a visual design document.

Instead, it specifies the principles, workflows, behaviors, and interactions that make the platform intuitive, predictable, and enjoyable.

Every page, workflow, and interaction should follow this document.

Core UX Philosophy

Morphic Studio should feel like a professional creative studio, not a collection of AI tools.

The platform should reduce mental load, guide users through complex tasks, and preserve creative flow.

The user should always feel:

- In control.
 - Informed.
 - Supported.
 - Free to experiment.
 - Confident that nothing important will be lost.
-

UX Principles

1. Progressive Disclosure

Never overwhelm users with every option at once.

Start simple.

Reveal advanced tools only when they are needed.

2. AI as a Collaborator

The AI should recommend, explain, and assist.

It should not silently make irreversible creative decisions.

Whenever AI performs a significant action, users should understand:

- What happened.
 - Why it happened.
 - What they can do next.
-

3. Preserve Creative Flow

Interruptions should be minimized.

Long AI tasks should run in the background while users continue working.

4. Consistency

The same interaction patterns should be used throughout the platform.

Buttons, dialogs, navigation, and terminology should behave consistently.

5. Reversibility

Every important action should be reversible where practical.

Creators should feel safe exploring ideas without fear of losing work.

6. Context Awareness

Every screen should understand the current project context.

Examples:

- Active project.
- Current chapter.
- Selected character.
- Selected scene.
- Current AI task.

Users should never wonder what the platform is working on.

Workflow Philosophy

Every major workflow follows the same pattern:

1. Understand
2. Plan
3. Generate
4. Review
5. Approve
6. Save
7. Reuse

The platform should avoid generating content before understanding the user's intent.

Navigation Principles

Navigation should be:

- Predictable.
- Persistent.
- Searchable.
- Keyboard-friendly.
- Responsive.

Primary navigation should expose only the highest-level modules, while detailed tools appear within the relevant workspace.

Feedback Principles

Every user action should receive immediate feedback.

Feedback may include:

- Progress indicators.
 - Success confirmations.
 - Error explanations.
 - AI reasoning summaries.
-

Error Experience

Errors should be educational.

Instead of saying:

"Generation failed."

The platform should explain:

- Why it failed.
 - What was attempted.
 - How to resolve it.
 - What data is safe.
-

Trust

Trust is central to the Morphe Studio experience.

Creators should always know:

- What AI is doing.
 - What information AI is using.
 - What will be saved.
 - What will change.
-

Creative Momentum

The platform should encourage creators to keep moving.

If one task is blocked, the system should suggest meaningful alternatives instead of leaving users at a dead end.

Success

A successful UX means that creators spend their time thinking about stories, characters, and ideas—not about learning the software.
