

Morphic Studio

Document 08 — Design System Foundation

Document ID: MS-008

Version: 1.0

Status: Foundation

Purpose

This document establishes the reusable visual building blocks used throughout Morphic Studio.

Every screen should be assembled from a shared component library to ensure consistency, maintainability, and scalability.

Principles

- Consistency over novelty.
 - Accessibility by default.
 - Responsive across devices.
 - Reusable before creating new components.
 - Animation with purpose.
-

Core Design Tokens

The design system defines:

- Spacing
- Typography
- Colors
- Elevation
- Borders
- Shadows
- Animation timing
- Corner radius
- Icons

- Illustrations
- Grid layouts
- Component states

These tokens become the single source of truth for the interface.

Component Categories

- Navigation
- Buttons
- Cards
- Forms
- Inputs
- Tables
- Dialogs
- Sidebars
- Toolbars
- Tabs
- Accordions
- Progress Indicators
- Notifications
- Context Menus
- Timeline Components
- Story Components
- Character Cards
- Asset Cards
- AI Chat Components
- Generation Panels
- Media Viewers
- Editors
- Canvas Components
- Export Panels
- Dashboard Widgets
- Project Cards
- Analytics Widgets

Every future feature should reuse these components whenever possible.

Responsive Strategy

Desktop first.

Tablet optimized.

Mobile supported for project management and review.

Complex creative editing remains optimized for larger screens.

Accessibility

The interface should support:

- Keyboard navigation.
 - Screen reader compatibility.
 - High contrast mode.
 - Scalable typography.
 - Accessible color contrast.
 - Visible focus states.
-

Motion

Motion communicates state changes.

Animations should:

- Be fast.
 - Feel natural.
 - Never delay productivity.
 - Support orientation rather than decoration.
-

Future Expansion

The design system should eventually include:

- Component documentation.
 - Code snippets.
 - React component library.
 - Design tokens.
 - Developer guidelines.
 - Google Stitch templates.
 - Replit starter templates.
-

Design System Goals

The Morphic Studio Design System should become the single source of truth for every interface element.

Whether a developer is building a dashboard, an AI panel, a comic editor, or an animation timeline, they should assemble the interface using standardized components rather than creating new ones.

This approach improves:

- Consistency
- Development speed
- Maintainability
- Accessibility
- User familiarity
- Long-term scalability
