

Morphic Studio

Document 02A — Product Requirements Document (PRD)

Foundation

Document ID: MS-002A

Version: 1.0

Status: Draft

1. Purpose

This Product Requirements Document (PRD) defines the functional objectives, product scope, system boundaries, and user requirements for Morphic Studio.

Its purpose is to ensure that designers, developers, AI engineers, testers, and future contributors share a common understanding of how the platform should operate.

This document defines **what** the product must accomplish. Technical implementation details are covered in later documents.

2. Product Overview

Morphic Studio is an AI-powered creative platform that enables users to transform ideas into complete storytelling projects.

Unlike traditional AI tools that focus on isolated generation tasks, Morphic Studio manages the entire creative lifecycle—from concept development to final production.

The platform combines writing, planning, world-building, asset management, comics, animation, and publishing into a unified workflow coordinated by Morphic Core.

3. Product Objectives

The primary objectives of Morphic Studio are to:

- Simplify professional storytelling workflows.
 - Reduce repetitive creative work through AI assistance.
 - Preserve long-term project consistency.
 - Provide reusable creative assets.
 - Support multiple storytelling formats.
 - Keep creators in control of every important decision.
 - Enable projects to evolve over months or years without losing continuity.
-

4. Target Users

Primary Users

- Individual creators
- Writers
- Comic creators
- Independent animators
- Small creative teams (3–5 users)

Secondary Users (Future)

- Professional studios
 - Publishers
 - Schools and universities
 - Marketing teams
 - Content agencies
 - Entertainment companies
-

5. Product Scope

Version 1 focuses on creating a reliable creative foundation.

Included:

- User authentication
- Project management
- Story Bible
- Character Studio
- Asset Library

- AI-assisted story analysis
- Storyboard generation
- Comic generation
- Export tools

Deferred to later versions:

- Full animation production
 - Real-time collaboration
 - Marketplace
 - Plugin ecosystem
 - Team permissions
 - Mobile applications
-

6. Product Architecture

Morphic Studio consists of four primary layers.

Layer 1 — User Experience

Responsible for:

- Dashboard
 - Editors
 - Workspaces
 - Navigation
 - Settings
 - User interactions
-

Layer 2 — Project Brain

Each project has its own Project Brain.

Responsibilities include:

- Project memory
- Creative intent
- Current production state
- User preferences
- Asset references
- Story progression

Every project is isolated from every other project.

Layer 3 — Morphic Core

Morphic Core coordinates platform intelligence.

Responsibilities:

- AI orchestration
- Workflow planning
- Story analysis
- Context management
- System coordination
- Memory synchronization

Layer 4 — AI Services

External AI systems perform specialized tasks.

Examples include:

- Language models
- Image generation
- Voice synthesis
- Animation assistance
- Audio generation

These services are replaceable without changing the overall platform architecture.

7. Core Product Modules

Version 1 includes the following modules.

Dashboard

Central workspace for all projects.

Project Manager

Create, organize, duplicate, archive, and manage projects.

Story Bible

Maintain canonical project knowledge.

Character Studio

Manage characters and reusable character assets.

World Builder

Define locations, rules, cultures, and environments.

Asset Library

Store reusable assets including:

- Characters
 - Outfits
 - Backgrounds
 - Props
 - Voices
 - Music
 - Effects
-

Comic Studio

Create and edit comic pages.

AI Assistant

Provide contextual suggestions throughout the creative workflow.

Export Center

Export projects into supported formats.

8. Project Lifecycle

Every project follows the same production lifecycle.

Project Created

Story Imported or Written

Story Analysis

Project Brain Initialized

Story Bible Generated

Assets Generated

Storyboarding

Production

Editing

Publishing

9. Core Product Rules

Every system must follow these rules.

Rule 1

The Story Bible is the canonical source of project truth.

Rule 2

AI should analyze before generating.

Rule 3

Previously generated assets should be reused whenever appropriate.

Rule 4

Users always have final approval.

Rule 5

No AI module may permanently modify project data without user confirmation.

Rule 6

Projects remain independent unless intentionally linked.

Rule 7

Every important action should be reversible whenever technically feasible.

10. Success Metrics

Version 1 will be considered successful if users can:

- Create a project.
 - Build a Story Bible.
 - Generate consistent characters.
 - Produce comic pages.
 - Reuse assets efficiently.
 - Export completed work.
 - Continue the same project without losing continuity.
-

11. Guiding Principle

Morphic Studio is not designed to generate isolated images.

It is designed to help creators build complete, evolving creative universes supported by intelligent project memory and AI-assisted production workflows.

Every feature added to the platform should strengthen that mission.
