

Morphic Studio Product Architecture Specification

Document 55 — Story Bible, Canon Engine & Narrative Intelligence Specification

Version: 1.0

Status: Approved

1. Purpose

This document defines the Story Bible, Canon Engine, and Narrative Intelligence System for Morphe Studio.

Its purpose is to establish a single authoritative source of truth for every creative project while providing intelligent validation, reasoning, continuity management, and narrative analysis throughout the lifetime of the project.

The Story Bible is not merely documentation—it is an active knowledge system.

2. Design Philosophy

The Canon Engine follows these principles:

- Canon is authoritative.
 - AI assists but never overrides canon.
 - Continuity is continuously monitored.
 - Narrative intelligence explains rather than merely reports.
 - Every canonical change is traceable.
 - Large fictional universes remain manageable.
 - Alternate realities remain isolated unless intentionally connected.
-

3. Story Bible Architecture

The Story Bible organizes canonical knowledge into structured domains.

Core domains include:

- Story Overview
- Characters
- Locations
- Timeline
- Organizations
- Lore
- Technology
- Magic Systems
- Artifacts
- Species
- Relationships
- Themes
- Rules
- Glossary
- Production Notes

Every entry has version history and ownership.

4. Canon Engine

The Canon Engine continuously validates project consistency.

Responsibilities include:

- Canon enforcement
- Dependency tracking
- Contradiction detection
- Consistency scoring
- Rule validation
- Change impact analysis
- Narrative reasoning

Validation occurs continuously as projects evolve.

5. Canon Rules

Rules define immutable or controlled aspects of the project.

Examples include:

- Physical laws

- Magic limitations
- Technology constraints
- Character identities
- Species capabilities
- Geography
- Political boundaries
- Historical events

Rules may be categorized as:

- Immutable
- Protected
- Flexible
- Experimental

Each rule records its justification and history.

6. Narrative Dependency Graph

The platform maintains a dependency graph connecting:

Characters

↓

Events

↓

Scenes

↓

Locations

↓

Relationships

↓

Organizations

↓

World Rules

Story Outcomes

Changes to one entity automatically identify potentially affected narrative elements.

7. Continuity Validation

The Canon Engine verifies:

- Character ages
- Character knowledge
- Relationship consistency
- Timeline order
- Geographic movement
- World rules
- Technology availability
- Magic usage
- Artifact ownership
- Organization membership

Detected issues are classified by severity.

8. Conflict Detection

Identify contradictions such as:

- Timeline inconsistencies
- Impossible travel
- Conflicting character memories
- Rule violations
- Duplicate canon
- Broken relationships
- Historical conflicts
- Logical inconsistencies

Conflicts include explanations and recommended resolutions.

9. Character Consistency

Continuously evaluate:

- Personality
- Motivations
- Dialogue
- Knowledge
- Emotional progression
- Relationships
- Skills
- Goals

AI-generated content should reference these evaluations before generation.

10. World Consistency

Validate:

- Geography
- Political systems
- Cultures
- Religions
- Languages
- Technology
- Magic
- Ecology
- Economy

Cross-reference all world elements with established lore.

11. Timeline Intelligence

Maintain chronological integrity.

Capabilities include:

- Event ordering
- Character timelines
- World history
- Parallel timelines
- Flashbacks

- Future events
- Causal dependencies

Timeline visualization supports exploration and validation.

12. Narrative Intelligence

Provide higher-level analysis including:

- Plot coherence
- Character arc completeness
- Theme consistency
- Narrative pacing
- Unresolved storylines
- Missing motivations
- Weak causal links
- Structural balance

Insights are advisory rather than prescriptive.

13. AI Narrative Reasoning

AI may perform:

- Continuity review
- Canon-aware brainstorming
- Plot impact analysis
- Alternative scenario exploration
- Narrative risk assessment
- Consistency explanations

All reasoning uses Canonical Memory as the primary reference.

14. Multi-Project & Franchise Support

Support:

- Book series
- Comic universes
- Film franchises
- Game universes
- Shared worlds

- Spin-offs
- Alternate timelines
- Reboots

Projects inherit canon according to configurable relationships.

15. Canon Versioning

Support:

- Draft canon
- Published canon
- Archived canon
- Experimental canon
- Alternate canon branches

Creators may compare, merge, or restore canonical versions.

16. Story Health Dashboard

Provide metrics including:

- Canon completeness
- Continuity score
- Character consistency
- World consistency
- Timeline integrity
- Narrative complexity
- Unresolved conflicts
- AI confidence
- Canon change history

These metrics help creators monitor project quality over time.

17. Integration

The Canon Engine integrates with:

- Story Workspace
- Character Studio
- World Builder
- AI Gateway

- Knowledge Graph
- Creative Memory
- Workflow Engine
- Analytics
- Collaboration
- Publishing Center

All dependent systems consume canonical knowledge through documented interfaces.

18. Acceptance Criteria

The Story Bible and Canon Engine are successful if:

- Canon remains authoritative.
 - Contradictions are detected early.
 - Narrative dependencies remain traceable.
 - AI consistently respects established lore.
 - Multi-book and franchise projects remain coherent.
 - Alternate timelines remain isolated unless intentionally connected.
 - Creators retain complete authority over canonical decisions.
-

Conclusion

The Morpheic Studio Story Bible, Canon Engine, and Narrative Intelligence System transforms the traditional concept of a story bible into an active reasoning platform. By combining structured canonical knowledge, dependency analysis, intelligent validation, continuity monitoring, and AI-assisted narrative reasoning, the system enables creators to manage stories of virtually unlimited complexity while preserving consistency, coherence, and creative intent across novels, comics, games, films, and long-running fictional universes.
