

Morphic Studio

Document 17 — Script & Story Editor (Expanded Specification)

Document ID: MS-017

Version: 2.0

Status: Expanded Specification

Priority: Critical

Purpose

The Script & Story Editor is the primary creative writing environment within Morphe Studio.

It allows creators to write, organize, edit, import, analyze, and manage stories before any AI generation begins.

Unlike a traditional text editor, the Script & Story Editor is AI-aware. It understands narrative structure, references the Story Bible, Character Manager, Asset Library, and World Builder, and continuously assists creators while preserving their creative intent.

The editor is where ideas become structured stories ready for production.

Vision

The Script & Story Editor should feel like writing with an intelligent creative partner.

Rather than simply correcting grammar or generating text, Morphe Studio should help creators build coherent, emotionally engaging stories while respecting their unique style.

The creator always remains in control.

Core Principles

The Script & Story Editor shall be:

- Creator-first
 - AI-assisted
 - Non-destructive
 - Context-aware
 - Distraction-free
 - Modular
 - Version-controlled
 - Extensible
-

Objectives

The Script & Story Editor shall:

- Support writing from scratch.
 - Import existing scripts.
 - Organize stories into chapters, episodes, or scenes.
 - Analyze narrative structure.
 - Detect inconsistencies.
 - Connect automatically to the Story Bible.
 - Prepare stories for AI production.
 - Preserve all revision history.
-

Supported Writing Formats

Version 1 should support:

- Plain Text
- Markdown
- Rich Text

Future versions may support:

- Final Draft
- Fountain
- Celtx
- PDF Import
- Microsoft Word
- Google Docs Import

- EPUB
 - Novel formats
-

Story Structure

Creators may organize projects into:

Project

↓

Season (Optional)

↓

Arc

↓

Chapter

↓

Episode

↓

Scene

↓

Shot (Future)

The hierarchy should be flexible enough for comics, animations, novels, and hybrid storytelling.

Writing Experience

The editor should provide:

- Clean writing interface
- Autosave

- Full-screen mode
- Focus mode
- Dark mode
- Light mode
- Word count
- Reading time
- Character count
- Search
- Replace
- Outline panel
- Scene navigator

The interface should minimize distractions while maximizing productivity.

AI-Assisted Writing

The AI may assist with:

- Grammar suggestions
- Dialogue refinement
- Scene descriptions
- Pacing analysis
- Continuity checks
- Character consistency
- World consistency
- Tone suggestions
- Plot hole detection
- Alternative wording

All AI suggestions are optional and require creator approval.

Story Analysis

When a script is saved, Morphic Core shall analyze it to identify:

- Characters
- Locations
- Props
- Organizations
- Timeline events
- Emotional beats
- Dialogue
- Actions
- Relationships

- World references

The results are presented to the creator before updating the Story Bible.

Creative Intent Recognition

Beyond identifying facts, the AI should attempt to understand:

- Themes
- Character motivations
- Emotional progression
- Narrative tension
- Story pacing
- Symbolism (Future)
- Recurring motifs (Future)

This information feeds the Creative Memory Engine.

User Stories

As a creator, I want to write naturally without learning prompt engineering.

As a creator, I want AI to understand my story before generating visuals.

As a creator, I want suggestions without losing my unique writing style.

As a creator, I want all revisions saved automatically.

As a creator, I want to import stories I have already written.

Functional Requirements

The Script & Story Editor shall allow users to:

- Create stories.
- Edit stories.
- Import stories.
- Export stories.
- Split chapters.
- Merge chapters.
- Create scenes.

- Move scenes.
 - Duplicate scenes.
 - Archive scenes.
 - Restore previous versions.
 - Search and replace text.
 - Add creator notes.
-

Version History

Every edit should be tracked.

Creators should be able to:

- View history.
 - Restore older versions.
 - Compare revisions.
 - Name important milestones.
 - Branch alternate storylines (Future).
-

Integration

The Script & Story Editor integrates directly with:

- Story Bible
- Character Manager
- World Builder
- Asset Library
- Creative Memory Engine
- AI Planner
- Storyboard Studio

Changes should synchronize automatically where appropriate.

Database Entities

Core entities include:

- Story
- Chapter
- Episode
- Scene

- Dialogue
 - Revision
 - StoryNote
 - Outline
 - StoryMetadata
-

API Considerations

Potential endpoints include:

- Create Story
 - Update Story
 - Delete Story
 - Analyze Story
 - Retrieve Chapters
 - Save Revision
 - Export Story
 - Import Story
-

Non-Functional Requirements

The editor should:

- Save automatically.
 - Load quickly.
 - Handle very large manuscripts.
 - Support offline drafting (Future).
 - Preserve formatting.
 - Maintain responsive performance.
-

Error Handling

If synchronization fails:

- Preserve local changes.
- Retry automatically.
- Inform the creator.
- Prevent data loss.

If AI analysis fails:

- Continue allowing manual editing.
 - Retry analysis later.
-

Future Expansion

Future versions may include:

- Collaborative editing.
 - Live co-authoring.
 - AI writing coach.
 - Story structure visualization.
 - Plot graph analysis.
 - Emotion timeline.
 - Interactive outlining.
 - Voice dictation.
 - Automatic screenplay conversion.
 - Novel-to-comic adaptation.
-

Acceptance Criteria

The Script & Story Editor succeeds when creators can write naturally, organize complex stories, collaborate with AI without losing creative control, and seamlessly prepare projects for visual production.

Key Principle

Stories should be written for people, not for AI. Morphic Studio adapts to the creator's storytelling process, not the other way around.
