

Morphic Studio UX & Design System Specification

Document 62 — Navigation, Information Architecture & Workspace Experience Specification

Version: 1.0

Status: Approved

1. Purpose

This document defines the Navigation System, Information Architecture, and Workspace Experience for Morphic Studio.

Its purpose is to provide a unified navigation framework that enables creators to move efficiently across projects, creative modules, AI tools, assets, workflows, and administrative functions while maintaining context and minimizing cognitive load.

Navigation should scale from small personal projects to enterprise-scale creative organizations.

2. Navigation Philosophy

Navigation follows these principles:

- Context should never be lost.
 - Navigation should minimize interruptions.
 - Frequently used actions should require minimal effort.
 - Related tools should be grouped naturally.
 - Navigation should adapt to user workflows.
 - AI should assist discovery without replacing user control.
 - Every destination should be reachable through multiple interaction methods.
-

3. Information Architecture

The platform is organized into the following top-level domains:

- Dashboard
- Projects
- Story Workspace
- Character Studio
- World Builder
- Story Bible
- AI Workspace
- Visual Studio
- Production Studio
- Asset Manager
- Publishing Center
- Marketplace
- Administration
- Settings
- Help & Learning

Each domain has clearly defined ownership and responsibilities.

4. Global Navigation

Provide a persistent global navigation system including:

- Primary navigation rail
- Expandable sidebar
- Project switcher
- Notifications
- AI Assistant access
- User profile
- Workspace selector
- Organization selector

Navigation remains available throughout the platform.

5. Workspace Navigation

Each workspace includes:

- Local navigation
- Section hierarchy

- Context toolbar
- Secondary actions
- Workspace-specific shortcuts
- Status indicators

Workspace navigation reflects the current creative task.

6. Project Navigation

Support hierarchical navigation through:

Organization

Workspace

Project

Book

Chapter

Scene

Asset

Task

Users may collapse or expand hierarchy levels.

7. Universal Search

Provide intelligent search across:

- Projects
- Stories
- Characters
- Locations
- Assets
- Workflows
- AI conversations
- Plugins
- Documentation
- Settings

Search supports:

- Full-text search
- Semantic search
- Filters
- Saved searches
- Recent searches

Results are ranked by relevance and context.

8. Command Palette

A universal command palette enables users to:

- Open modules
- Execute commands
- Search content
- Launch AI actions
- Switch projects
- Create resources
- Run workflows
- Access settings

The command palette is fully keyboard accessible.

9. Context Awareness

Navigation should adapt based on:

- Current project
- Active module
- User permissions
- Recently used items
- Open resources
- Team context
- AI recommendations

Context reduces unnecessary navigation steps.

10. Dockable Workspace

Support configurable layouts with:

- Dockable panels
- Resizable panels
- Floating windows
- Multi-monitor support
- Panel pinning
- Panel grouping
- Workspace presets

Users may save multiple workspace layouts.

11. Favorites & Quick Access

Support:

- Pinned projects
- Favorite assets
- Favorite workflows
- Favorite prompts
- Favorite characters
- Favorite locations
- Recently opened items
- Frequently used commands

Quick access improves productivity.

12. Breadcrumb Navigation

Provide breadcrumb trails showing:

Organization

→ Workspace

→ Project

→ Module

→ Resource

Users may navigate directly from any breadcrumb level.

13. Keyboard Navigation

Support comprehensive keyboard workflows including:

- Global shortcuts
- Workspace shortcuts
- Command palette
- Panel navigation
- Search activation
- Resource switching
- Navigation history

Keyboard-first workflows should be available for all primary actions.

14. Cross-Module Transitions

Moving between modules should preserve:

- Active project
- Selected entities
- Scroll position
- Filters
- Search context
- Open panels
- Unsaved work

Transitions should feel seamless.

15. Personalization

Users may customize:

- Navigation order
- Sidebar visibility
- Workspace layouts
- Favorite modules
- Default landing page
- Shortcut preferences
- Theme
- Panel behavior

Personalization should never compromise consistency.

16. Navigation Analytics

Collect anonymized operational metrics including:

- Frequently accessed modules
- Search success rates
- Navigation paths
- Workspace switching frequency
- Command palette usage
- Shortcut adoption
- Time-to-task metrics

Insights support continuous UX improvements.

17. Integration

The Navigation System integrates with:

- Design System
- AI Assistant
- Workflow Engine
- Asset Manager
- Story Workspace
- Character Studio

- World Builder
- Story Bible
- Publishing Center
- Marketplace
- Administration

Every module participates in the same navigation framework.

18. Acceptance Criteria

The Navigation System is successful if:

- Users can reach any feature quickly.
 - Context is preserved across modules.
 - Universal Search and the Command Palette reduce navigation effort.
 - Workspace layouts support different creative workflows.
 - Navigation remains intuitive as the platform grows.
 - Keyboard-first users can access all major functionality.
 - Personalization enhances efficiency without fragmenting the user experience.
-

Conclusion

The Morpheic Studio Navigation System establishes a scalable, context-aware framework that unifies every module into a seamless creative workspace. Through intelligent information architecture, adaptive navigation, universal search, customizable workspaces, and efficient keyboard-driven interaction, it enables creators to focus on storytelling and production rather than searching for tools, ensuring that Morpheic Studio remains intuitive even as its capabilities continue to expand.
