

Morphic Studio UX & Design System Specification

Document 63 — Dashboard, Home Experience & Personalized Productivity Workspace Specification

Version: 1.0

Status: Approved

1. Purpose

This document defines the Dashboard, Home Experience, and Personalized Productivity Workspace for Morphic Studio.

Its purpose is to provide creators with an intelligent starting point that summarizes project activity, surfaces priorities, offers AI guidance, and enables rapid access to ongoing work while adapting to individual workflows and organizational contexts.

The Dashboard acts as the operational command center for the platform.

2. Design Philosophy

The Dashboard follows these principles:

- Start with what matters most.
 - Reduce decision fatigue.
 - Surface relevant information automatically.
 - Allow complete customization.
 - Prioritize action over information overload.
 - Support both individual creators and teams.
 - Continuously adapt to changing workflows.
-

3. Dashboard Layout

The default layout includes:

Top Header

- Global search
- Notifications
- AI Assistant
- Organization selector
- User profile

Main Workspace

- Daily briefing
- Recent projects
- Continue working
- Productivity overview
- AI recommendations

Right Sidebar

- Upcoming tasks
- Calendar
- Activity feed
- Team updates
- Quick actions

Footer (optional)

- System status
- Version information
- Resource usage

All regions are configurable.

4. AI Daily Briefing

When the user signs in, the AI generates a contextual summary including:

- Active projects
- Recent progress
- Outstanding tasks
- Deadlines
- Canon conflicts
- AI suggestions
- Collaboration requests
- Publishing milestones

The briefing references project context rather than generic productivity advice.

5. Continue Working

Provide intelligent resume options based on:

- Last active project
- Open chapters
- Active scenes
- Recent assets
- AI conversations
- Drafts
- Pending reviews

Users should resume work with a single action.

6. Project Overview Cards

Each project card displays:

- Title
- Cover image
- Current stage
- Progress indicator
- Team members
- Recent activity
- Upcoming milestones
- Canon health
- Last modified date

Cards support quick navigation and contextual actions.

7. Productivity Widgets

Available widgets include:

- Word count
- Writing streaks
- Creative goals
- Daily progress
- Weekly progress
- Task completion
- AI usage

- Time spent
- Session history
- Milestone tracking

Users may add, remove, resize, or reorder widgets.

8. Notifications & Activity Feed

Display:

- Comments
- Mentions
- Review requests
- Workflow completions
- AI task completion
- Publishing events
- Plugin updates
- Organization announcements

Notifications are grouped by relevance and urgency.

9. Calendar & Timeline

Provide:

- Deadlines
- Publishing schedules
- Team meetings
- Milestones
- Workflow reminders
- Personal goals

Calendar integrates with project workflows and organizational planning.

10. AI Recommendations

The Dashboard may recommend:

- Continue unfinished scenes
- Resolve canon conflicts
- Review character consistency
- Complete pending approvals

- Organize assets
- Publish ready content
- Explore unused ideas

Recommendations include brief explanations and estimated impact.

11. Team Collaboration Overview

Organizations may display:

- Active collaborators
- Assigned tasks
- Review queues
- Team workload
- Recently shared assets
- Production status
- Project health

Information respects user permissions.

12. Resource Monitoring

Display operational information including:

- AI credits or usage
- Storage utilization
- Render queue status
- Plugin updates
- Synchronization status
- Background jobs

Users may customize visibility of operational metrics.

13. Custom Dashboard Builder

Users may configure:

- Widget layout
- Widget size
- Display density
- Color accents
- Favorite projects

- Quick action buttons
- Default dashboard presets

Organizations may provide standardized dashboard templates.

14. Focus Mode Entry

The Dashboard provides one-click access to Focus Mode.

Entering Focus Mode:

- Minimizes distractions
- Hides non-essential widgets
- Opens the selected creative workspace
- Preserves context
- Suspends low-priority notifications

Focus sessions are tracked for productivity insights.

15. Enterprise Dashboards

Organizations may create specialized dashboards for:

- Writers
- Editors
- Producers
- Art Directors
- Project Managers
- Administrators
- Executives

Each dashboard presents role-specific metrics and actions.

16. Adaptive Personalization

The Dashboard continuously learns from:

- Frequently opened projects
- Preferred modules
- Widget usage
- Time-of-day activity
- Team interactions

- AI acceptance patterns

Adaptation improves relevance while preserving user control.

17. Integration

The Dashboard integrates with:

- Story Workspace
- Character Studio
- World Builder
- Story Bible
- AI Workspace
- Visual Studio
- Production Studio
- Asset Manager
- Workflow Engine
- Publishing Center
- Analytics
- Notifications

It serves as the unified entry point into the Morpheic Studio ecosystem.

18. Acceptance Criteria

The Dashboard is successful if:

- Users immediately understand project priorities.
 - Recent work can be resumed in one action.
 - AI recommendations are contextual and actionable.
 - Widgets are fully customizable.
 - Team collaboration is visible without becoming distracting.
 - Focus Mode is easily accessible.
 - The experience scales from individual creators to enterprise organizations.
-

Conclusion

The Morpheic Studio Dashboard transforms the traditional application homepage into an intelligent creative command center. By combining personalized project summaries, AI-generated briefings, productivity insights, collaboration updates, adaptive recommendations, and customizable widgets, it provides creators

with a clear understanding of where they are, what matters most, and how to continue meaningful work with minimal friction while remaining fully integrated with every major platform capability.
