

# Morphic Studio UX & Design System Specification

## Document 64 — AI User Experience, Conversational Interfaces & Human-AI Interaction Specification

Version: 1.0

Status: Approved

---

### 1. Purpose

This document defines the AI User Experience, Conversational Interface, and Human-AI Interaction Model for Morphe Studio.

Its purpose is to establish how creators communicate with AI across every workspace while ensuring that AI interactions remain contextual, transparent, explainable, trustworthy, and always subordinate to human creative authority.

AI is a collaborator—not the owner of the creative process.

---

### 2. Design Philosophy

Human-AI interaction follows these principles:

- Human creativity always leads.
  - AI should appear where it is useful.
  - AI should never interrupt unnecessarily.
  - Recommendations should be explainable.
  - Context should reduce prompting effort.
  - Every AI action should be reversible where practical.
  - Users should always know when AI is acting.
-

## 3. AI Interaction Modes

Support multiple interaction models including:

- Conversational chat
- Inline suggestions
- Context menus
- Quick actions
- Background automation
- Multi-agent collaboration
- Voice interaction
- Prompt templates
- AI command palette
- Workflow-triggered AI

Users may switch seamlessly between modes.

---

## 4. AI Workspace

The dedicated AI Workspace includes:

- Conversation history
- Active context
- Agent selector
- Prompt composer
- Shared project references
- Memory viewer
- AI task queue
- Generated outputs
- Saved prompts

The workspace synchronizes with all project modules.

---

## 5. Inline AI Assistance

AI may appear directly within editors to:

- Rewrite text
- Expand scenes
- Summarize content
- Generate dialogue
- Explain lore
- Suggest improvements

- Detect inconsistencies
- Recommend next actions

Inline suggestions should never overwrite user content automatically.

---

## 6. Multi-Agent Conversations

Users may involve multiple specialized agents simultaneously.

Example participants include:

- Creative Director
- Story Architect
- Character Coach
- World Builder
- Dialogue Specialist
- Editor
- Research Assistant
- Art Director
- Production Manager

Each agent contributes according to its defined expertise while sharing project context.

---

## 7. Prompt Composer

Provide an advanced prompt editor with:

- Rich text support
- Variable insertion
- Project references
- Character references
- Asset references
- Prompt history
- Saved templates
- Version comparison

Prompt construction should minimize repetitive input.

---

## 8. Context Management

AI automatically receives relevant context including:

- Active project
- Current module
- Story Bible
- Character profiles
- World lore
- Open assets
- Timeline state
- Canon rules
- Recent edits

Users may inspect, add, or remove contextual information before submitting requests.

---

## 9. Explainable AI

Significant AI outputs should include:

- Reasoning summary
- Relevant project references
- Canon citations
- Confidence level
- Assumptions
- Potential limitations
- Alternative approaches

Users may request deeper explanations when needed.

---

## 10. AI Memory Visualization

Provide visual access to AI memory including:

- Current working context
- Persistent project memory
- Story references
- Character references
- World references
- User-provided instructions
- Recently accessed knowledge

Users may edit or reset contextual memory according to permissions.

---

## 11. Suggestion Approval Workflow

AI-generated suggestions remain pending until the creator chooses to:

- Accept
- Reject
- Modify
- Request alternatives
- Save for later
- Compare versions

The platform preserves both AI-generated and user-edited revisions.

---

## 12. Voice Interaction

Support optional voice-based interaction including:

- Dictation
- Voice commands
- Conversational AI
- Playback of AI responses
- Accessibility narration
- Hands-free workflows

Voice interactions respect privacy settings and user consent.

---

## 13. Transparency & Trust

Every AI action should clearly communicate:

- Which agent responded
- Which model was used (where appropriate)
- Context utilized
- Confidence level
- Generated vs. retrieved content
- Any limitations or uncertainty

Transparency strengthens user trust.

---

## 14. Error Recovery

When AI cannot fulfill a request, it should:

- Explain the limitation
- Preserve user input
- Offer alternative actions
- Suggest clarification
- Retry where appropriate
- Avoid destructive behavior

Failures should degrade gracefully.

---

## 15. Accessibility

AI interactions support:

- Screen readers
- Keyboard-only workflows
- High-contrast themes
- Reduced motion
- Adjustable text size
- Voice accessibility
- Multilingual interaction
- Plain-language explanations

Accessibility applies equally to AI and non-AI interfaces.

---

## 16. Integration

The AI Experience integrates with:

- Story Workspace
- Character Studio
- World Builder
- Story Bible
- Visual Studio
- Production Studio
- Asset Manager
- Publishing Center
- Workflow Engine
- Dashboard
- Knowledge Graph

- Analytics

AI remains consistently available across every module.

---

## 17. Acceptance Criteria

The AI User Experience is successful if:

- AI feels like a natural collaborator rather than a separate application.
  - Context-aware assistance reduces repetitive prompting.
  - Multi-agent conversations remain coherent and useful.
  - Users understand why AI made recommendations.
  - Human approval is required for meaningful creative changes.
  - AI interactions remain accessible across supported devices.
  - Transparency and trust are maintained throughout the creative process.
- 

## Conclusion

The Morphe Studio AI User Experience transforms artificial intelligence from an isolated conversational interface into an integrated creative partner embedded throughout the platform. By combining contextual awareness, explainable recommendations, multi-agent collaboration, transparent operation, and human-centered control, the system empowers creators to work more efficiently while preserving authorship, confidence, and creative intent.
