

Morphic Studio UX & Design System Specification

Document 67 — Onboarding, Learning Experience & Progressive User Adoption Specification

Version: 1.0

Status: Approved

1. Purpose

This document defines the Onboarding System, Learning Experience, and Progressive User Adoption Framework for Morphic Studio.

Its purpose is to help new and experienced users become productive quickly by providing guided onboarding, adaptive learning, contextual assistance, and continuous skill development while minimizing cognitive overload.

Learning is treated as an ongoing experience rather than a one-time tutorial.

2. Design Philosophy

The onboarding experience follows these principles:

- Teach only what is needed now.
 - Learn by creating.
 - Progress should feel rewarding.
 - Guidance should never become intrusive.
 - AI acts as a mentor rather than an instructor.
 - Users remain free to explore independently.
 - Learning adapts to experience and goals.
-

3. First-Run Experience

The initial experience includes:

- Welcome screen

- Account setup
- Workspace selection
- Creative goals questionnaire
- Preferred role selection
- Device optimization
- Theme selection
- Accessibility preferences
- AI introduction

The setup process should be concise and skippable where appropriate.

4. User Profiles

Users may identify one or more primary roles, such as:

- Writer
- Novelist
- Screenwriter
- Comic Creator
- Artist
- World Builder
- Game Designer
- Educator
- Producer
- Team Manager
- Studio Administrator

The selected role influences onboarding recommendations but does not restrict functionality.

5. Guided Onboarding

Provide step-by-step onboarding journeys including:

- Creating the first project
- Exploring the Dashboard
- Writing the first scene
- Building a character
- Creating a world
- Using AI assistance
- Managing assets
- Publishing a sample project

Users may pause and resume onboarding at any time.

6. Sample Projects

Offer high-quality sample projects demonstrating:

- Story creation
- Character development
- World building
- AI collaboration
- Visual generation
- Production workflows
- Publishing

Sample projects remain editable within a sandbox environment.

7. AI Onboarding Assistant

The AI assistant helps users by:

- Answering questions
- Explaining features
- Recommending next steps
- Demonstrating workflows
- Identifying learning opportunities
- Adapting explanations to user experience

Users may disable or minimize AI guidance.

8. Progressive Feature Discovery

Advanced capabilities are introduced gradually through:

- Contextual prompts
- Milestone achievements
- Relevant recommendations
- Optional feature tours
- Learning suggestions

Users are never forced to complete tutorials before continuing work.

9. Contextual Help

Provide assistance through:

- Tooltips
- Inline guidance
- Keyboard shortcut hints
- Help overlays
- Embedded documentation
- AI explanations
- Interactive examples

Help appears when relevant and may be dismissed permanently.

10. Learning Paths

Support structured learning tracks for:

- Creative Writing
- Character Design
- World Building
- Visual Creation
- Multimedia Production
- Collaboration
- Publishing
- Studio Administration
- Enterprise Governance

Each path includes recommended milestones and optional assessments.

11. Interactive Tutorials

Tutorials include:

- Guided tasks
- Practice exercises
- Checkpoints
- AI feedback
- Progress tracking
- Optional challenges

Tutorials are interactive rather than purely instructional.

12. Documentation Integration

Documentation should be accessible from every workspace.

Support:

- Searchable documentation
- Context-sensitive articles
- Embedded examples
- API references
- Release notes
- Video tutorials
- Community resources

Documentation remains synchronized with product updates.

13. Skill Progression

Track learning progress including:

- Completed tutorials
- Feature familiarity
- Productivity milestones
- Certifications (optional)
- Learning streaks
- Achievement badges

Skill tracking motivates learning without becoming gamification-dependent.

14. Community Learning

Support:

- Community guides
- Shared templates
- Example projects
- User showcases
- Educational collections
- Discussion forums
- Best practices

Community resources complement official documentation.

15. Enterprise Onboarding

Organizations may define:

- Custom onboarding flows
- Internal documentation
- Required learning modules
- Role-specific training
- Compliance acknowledgements
- Organization templates
- Team mentors

Enterprise onboarding integrates with identity and permission systems.

16. Adaptive Learning

The platform continuously refines guidance based on:

- Frequently used features
- Ignored suggestions
- Learning progress
- Project complexity
- Team role
- AI interaction history
- Productivity patterns

Adaptation improves relevance while preserving user autonomy.

17. Integration

The Onboarding System integrates with:

- Dashboard
- Design System
- AI Workspace
- Story Workspace
- Character Studio
- World Builder
- Asset Manager
- Workflow Engine
- Help Center
- Analytics
- Community Platform

- Enterprise Administration

Learning resources are available throughout the platform.

18. Acceptance Criteria

The Onboarding Experience is successful if:

- New users can begin creating meaningful work quickly.
 - Advanced features are introduced progressively.
 - AI guidance adapts to user needs.
 - Learning resources remain accessible at any stage.
 - Sample projects demonstrate real workflows.
 - Organizations can customize onboarding.
 - Continuous learning supports long-term user growth.
-

Conclusion

The Morpheic Studio Onboarding and Learning Experience transforms product education into an adaptive, creator-centered journey. Through progressive feature discovery, contextual assistance, AI mentoring, interactive tutorials, structured learning paths, and continuous skill development, the platform enables users to grow naturally from beginners to expert creators while maintaining confidence, productivity, and creative momentum.
